

Our latest newsletter offers new product information and guidance on all aspects of temperature measurement.

Ingress Protection (IP) Rated Products

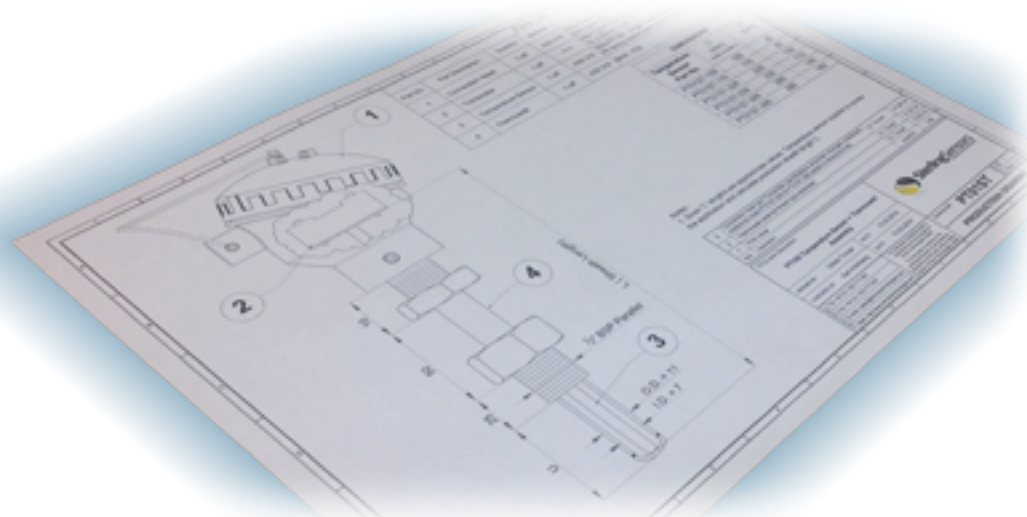

If you are measuring temperature in an environment where there is a lot of dust, liquids and oils, IP rated products are beneficial as they have a much longer lifespan when used in harsh environments.

To make things simple for you, we have updated our product images to include a logo stating the relevant level of ingress protection.

Our IP rated products are now also easy to find and are all listed in one convenient place on our website

The Sensors Tip #5 -What are the different IP Ratings?

Did you know? There are many types of IP ratings that define the level of protection against solid objects (including body parts), dust, accidental contact, and water in electrical enclosures

The standard aims to provide users more detailed information than vague marketing terms such as waterproof or water resistant.
